Because of your support of the Hospital Research Home Lottery, you are part of world-class, lifesaving medical research and improved patient care in South Australian hospitals.

You can feel proud knowing you're saving lives through The Hospital Research Foundation (THRF) through research that is informing treatments and most importantly finding cures for the most common diseases and illnesses that threaten us all.

THRF has proudly been supporting The Queen Elizabeth Hospital and the Basil Hetzel Institute for Translational Health Research for over 50 years and now expands its support to research and patient care more broadly across Adelaide. This includes the Royal Adelaide Hospital, Lyell McEwin Hospital and Centre for Cancer Biology.

Because of your support, this year THRF has been able to fund over \$7 million into South Australian Hospitals for lifesaving projects and equipment to help find cures and improve care in areas including cancer, heart disease and diabetes.

Currently supporting over 20 areas of research, all projects funded by THRF are translational, 'bench to bedside' – which means research undertaken in the lab, 'the bench', is translated into treatments that benefit people at the 'bedside' as soon as possible.

THRF also supports patient care initiatives that are helping to ensure that your care in hospital is as comfortable as possible and informed by the very latest research outcomes and the most advanced equipment.

Thank you for your support.
